GROUNDING

- This appliance must be grounded. Grounding reduces the risk of electrical shock by providing an escape wire for the electrical current.
- This appliance has a cord that has a grounding wire with a three-prong plug. The power cord must be plugged into an outlet that is properly grounded. If the outlet is a two-prong wall outlet, it must be replaced with a properly grounded three-prong wall outlet. The serial rating plate indicates the voltage and frequency the appliance is designed for.

WARNING! Improper use of the grounding plug can result in a risk of electric shock. Consult a qualified electrician or service agent if the grounding instructions are not completely understood, or if doubt exists as to whether the appliance is properly grounded.

- Do not connect appliance to extension cords or together with another appliance in the same wall outlet. Do not splice the power cord. Do not under any circumstances cut or remove the third grounding prong from the power cord. Do not use extension cords or ungrounded (two-prong) adapters.

INSTALLATION

NOTE: Moving the appliance requires at least two people.

LOCATION

- Place the appliance on a floor that is strong enough to support it when it is fully loaded.
- Do not place the appliance in direct sunlight or near sources of heat, such as a stove or heater, as this can increase electrical consumption. Extreme cold ambient temperatures may also cause the appliance to perform improperly.
- Do not use the appliance near water, for example in a wet basement or near a sink.
- This appliance is intended for indoor use only. It is not designed for outside installation, including anywhere that is not temperature controlled (garages, porches, vehicles, etc.).

SETUP

- Remove interior and exterior packaging prior to installation. Wipe the outside of the appliance with a soft, dry cloth and the inside with a lukewarm wet cloth.
- Before connecting the appliance to a power source, let it stand upright for approximately six hours. This will reduce the possibility of a malfunction in the cooling system from handling during transportation.
- Allow five inches of space between the back, sides and top of the appliance and all adjacent walls.

- This appliance is intended for free-standing installation only and is not intended to be built into a cabinet or counter. Building in this appliance can cause it to malfunction.
